## Why old methods don't work anymore?

Over the past year, the number of fitness tracker users has reached approximately 454.7 million. Yet, 80% of users stop using them after just three months. The main question - Why?

### Lack of motivation

Fitness trackers track the stats, but they fail to motivate. Users struggle to see the purpose, since the data never turns into real achievements

### Complexity of perception

Charts and metrics are overwhelming. Most users don't know what to do with them or how to apply them in real life, leaving the data useless.

### Lack of real benefit

Trackers promise "health", but users don't feel any noticeable changes. Over time, the device becomes just another accessory.

Everyone is tired of regular fitness trackers. It's boring, complicated, and useless.
